

One Platform to Integrate It All

Turn to FlexDeploy® for open systems and business systems

DevOps is an approach to software development that emphasizes collaboration, automation, and continuous improvement. It is relevant for both open and business systems (Oracle®, Salesforce®, SAP®) because it provides a framework for delivering high-quality software faster, with lower risk and greater efficiency.

FlexDeploy simplifies development and delivery for open and business systems, increasing developer productivity and operational efficiency, reducing costs, and minimizing security risks. It optimizes software delivery performance, resulting in improved user experience.

Top 10 reasons to choose Flexagon™ and the FlexDeploy DevOps Platform:

Accelerated Software Delivery

Using FlexDeploy accelerates software delivery capabilities, reducing the time and effort required to deliver high-quality software products while ensuring consistency, reducing the risk of errors, and promoting collaboration between teams. FlexDeploy automates the entire software delivery process, from code check-in to production deployment, resulting in faster, repeatable, and more reliable releases.

Native Enterprise Technology Ecosystem Plugins

Organizations can accelerate their software delivery process using FlexDeploy plugins for Oracle, Salesforce, and SAP. A plugin is a technology-specific module that encapsulates the complexity of its build and deploy operations. FlexDeploy plugins hide these complexities by presenting themselves to the user as flexible and easy-to-manage configuration parameters. The value of these plugins lies in their ability to streamline the software delivery process, automate manual tasks, reduce errors, and improve collaboration between teams.

Test Automation

FlexDeploy test automation framework provides a powerful and customizable solution for teams looking to optimize their DevOps process and improve software quality. By offering integration with leading test automation tools, customizable execution frameworks, support for multiple test types, comprehensive test results reporting, and integration within the DevOps pipeline, FlexDeploy enables teams to find and resolve issues faster and ensure quality releases.

Seamless Integrations

FlexDeploy has integration frameworks for the major tool categories and provides out-of-the-box integrations with the most popular DevOps technologies and tools. These include source code management, agile planning, service management, secrets management, test automation, security scanning, and collaboration tools. An integrated DevOps toolchain is essential for teams looking to accelerate their development cycles, improve software quality, and safely deliver value to their customers more quickly.

Top 10 reasons to choose Flexagon and the FlexDeploy DevOps Platform:

Role-Based Access Controls (RBAC)

FlexDeploy RBAC provides teams with the tools to control access to critical resources, reduce the risk of unauthorized changes, and maintain compliance with regulatory requirements. FlexDeploy allows teams to manage complex security policies with ease and confidence by providing granular control over access and customizable security policies..

Easy to Use and Customize

FlexDeploy helps teams streamline their software delivery process, improve productivity, and confidently deliver high-quality software products by providing an easy-to-use and customizable platform. With a user-friendly interface, intuitive workflows, flexible customization options, and extensive documentation and support, FlexDeploy empowers teams to achieve their goals and succeed in today's fast-paced software development environment.

Robust Reporting and Analytics

FlexDeploy's robust reporting and analytics capabilities give teams insight into their software delivery pipeline to identify areas for improvement and make data-driven decisions. By providing real-time data visualization, powerful analytics, customizable dashboards, and automated reporting, FlexDeploy empowers teams to continuously improve their software delivery process and confidently deliver high-quality software products.

Exceptional Customer Support

Exceptional customer support helps ensure FlexDeploy users have the resources they need to succeed with the platform. By providing timely and effective support, a comprehensive knowledge base, and a variety of training resources, FlexDeploy empowers its customers to achieve their goals and deliver high-quality software products with confidence.

Flexible Deployment Options

By providing flexible deployment options, FlexDeploy helps teams deploy software products in the way that best fits their needs, with support for on-premises, cloud, hybrid deployments, container deployments, and safe deployment strategies. FlexDeploy empowers teams to deploy software products more efficiently and confidently.

Environment Management

With FlexDeploy, teams can easily create, configure, and manage environments across the entire software delivery process, from development to production. FlexDeploy environment management capabilities allow teams to manage their software development and deployment environments easily. By streamlining environment management processes and providing powerful automation capabilities, teams can reduce the risk of errors, improve collaboration, and accelerate their software delivery process.
